

Custom-fit safety

Challenge

The customer needed assistance in engineering a fall protection system for their confined space entry. They also needed training for their employees to be OSHA compliant.

Solution

Lewis-Goetz conducted two separate training classes for employees at no charge. The training included how to properly inspect and custom fit each employee with their harness. Training also included specifics on how to use rescue and descent devices for confined space entry.

Bottom Line

All 15 customer employees have now been trained and are in compliance. At a cost of \$100 for each employee for outside training, the customer saved \$1,500.

Lewis-Goetz was able to provide safety training to the customer, which saved \$1,500 that they would have needed to pay for outside training.

FAST FACTS

Customer Profile:

A provider of technology-based ingredients and solutions for all sectors of the food, beverage and pharmaceutical markets

Challenge:

Assistance needed to engineer a fall protection system and training for OSHA compliance

Solution:

Lewis-Goetz conducted two separate training classes
